Topics Discussed:
All we did this week were building the main schemata about the System in order to get the first general idea. We all helped to build each some sketches and the System schema. After all the consulting, we ended up keeping 4 of them:
- Guest Login view
- Employee Login
- System hierarchical schema
- Schedule

Among the schema and sketches we also discussed of how we are going to build the Finance side and did some researches about the mapping system we are trying to integrate, hoping that it is going to come up the way we think.

Decisions Made:
We decided that we need a guest login and an employee login. Relying on the schema we are thinking of all the ways to simplify the way the Distribution Management System is going to look and operate. Schedule of employees was also an important page inside the web-view.

Tasks Assigned:
Everyone worked with the schemata and sketches. Besides that everyone helped building a better concept of the system and made researches on how we can integrate the mapping and the Employee of the month calculation algorithm. We also started to divide tasks about the requirements since next week the Requirements document is going to be submitted.
